LECTURE 8: SPARQL [1.1]

Aidan Hogan aidhog@gmail.com

Previously ...

COVERED SPARQL1.0

http://www.w3.org/TR/rdf-sparql-query/

W3C Recommendation

SPARQL Query Language for RDF

W3C Recommendation 15 January 2008

New Version Available: SPARQL 1.1 (Document Status Update, 26 March 2013)

The SPARQL Working Group has produced a W3C Recommendation for a new version of SPARQL which adds features to this 2008 version. Please see <u>SPARQL 1.1 Overview</u> for an introduction to SPARQL 1.1 and a guide to the SPARQL 1.1 document set.

This version:

http://www.w3.org/TR/2008/REC-rdf-sparql-query-20080115/ Latest version:

atest version:

http://www.w3.org/TR/rdf-sparql-query/

Previous version:

http://www.w3.org/TR/2007/PR-rdf-sparql-query-20071112/

Editors:

Eric Prud'hommeaux, W3C <<u>eric@w3.org</u>> Andy Seaborne, Hewlett-Packard Laboratories, Bristol <<u>andy.seaborne@hp.com</u>>

Today: SPARQL1.1

A Web standard

http://www.w3.org/TR/sparql11-query/

SPARQL 1.1 Query Language

W3C Recommendation 21 March 2013

This version:

http://www.w3.org/TR/2013/REC-sparql11-query-20130321/

Latest version:

http://www.w3.org/TR/sparql11-query/

Previous version:

http://www.w3.org/TR/2012/PR-sparql11-query-20121108/

Editors:

Steve Harris, Garlik, a part of Experian

Andy Seaborne, The Apache Software Foundation

Previous Editor:

Eric Prud'hommeaux, W3C

Please refer to the errata for this document, which may include some normative corrections.

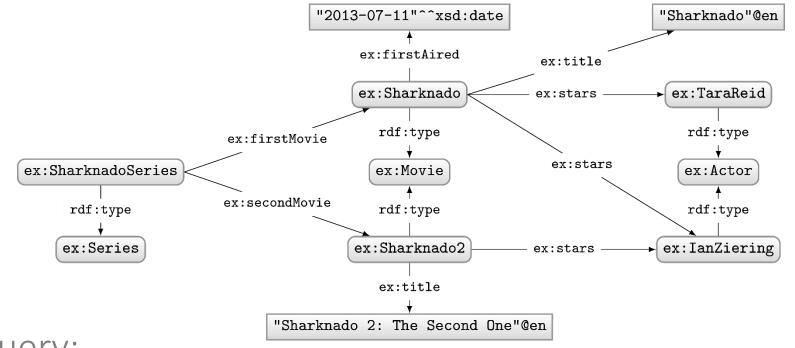

See also translations.

WHAT'S NEW IN SPARQL1.1?

- New query features
- An update language
- Support for RDFS/OWL entailment
- New output formats

Query feature: Negation

SPARQL1.0: NEGATION POSSIBLE W/ A TRICK!

Query:

```
PREFIX ex: <http://ex.org/voc#>
SELECT *
WHERE {
    ?movie a ex:Movie .
    OPTIONAL
    { ?movie ex:firstAired ?date . }
    FILTER(!BOUND(?date))
}
```

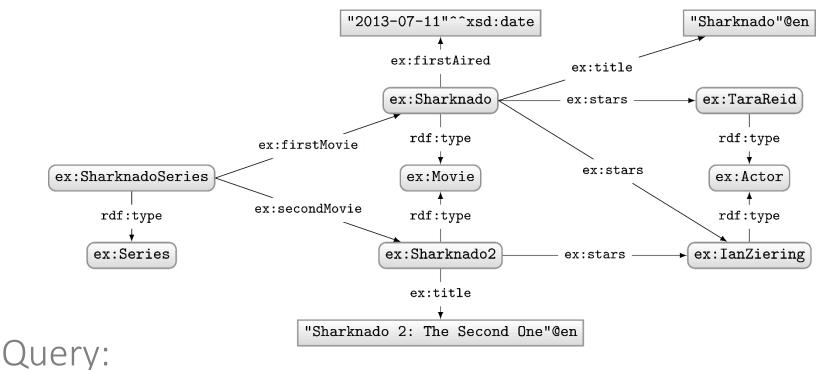

What solutions would this query return?

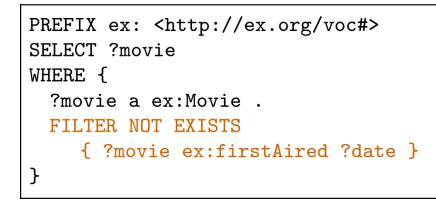

Solutions:

?movie	?date
ex:Sharknado2	

Can do a closed-world style of negation!

SPARQL1.1: (NOT) EXISTS

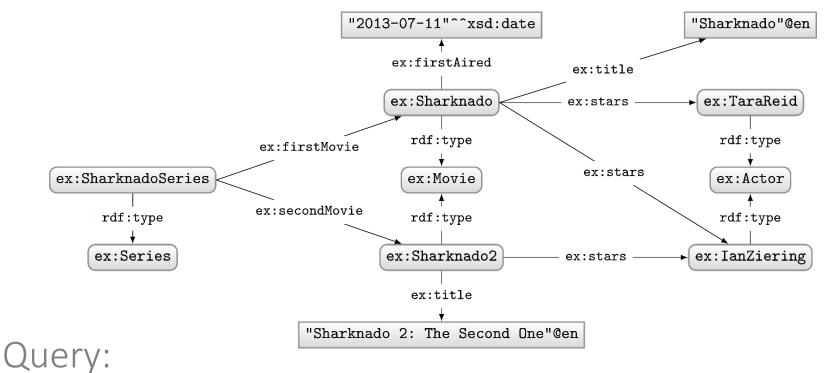

Solutions:

?movie

ex:Sharknado2

SPARQL1.1: MINUS

```
PREFIX ex: <http://ex.org/voc#>
SELECT ?movie
WHERE {
   ?movie a ex:Movie .
   MINUS
      { ?movie ex:firstAired ?date }
}
```

Solutions:

?movie

ex:Sharknado2

DIFFERENCE BETWEEN MINUS AND NOT EXISTS?

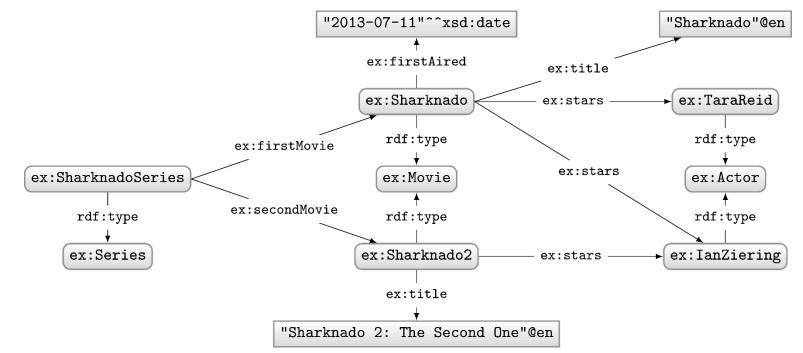

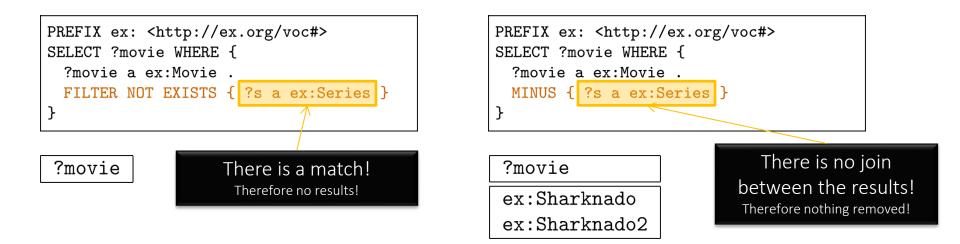

DIFFERENCE BETWEEN MINUS AND NOT EXISTS?

- NOT EXISTS: Returns results if right hand side has no matches
- MINUS: Removes solutions from the left hand side that would join with the right hand side

DIFFERENCE BETWEEN MINUS AND NOT EXISTS?

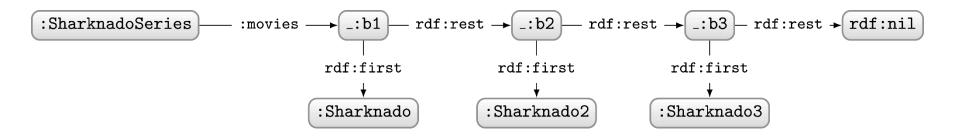

New query feature: Property paths

PROPERTY PATHS: REGULAR EXPRESSIONS

Only these features cannot be rewritten to something else. These features are "new", offering arbitrary length paths!

-	e defined recursively as		
	p	a predicate	
	e	inverse path	
	e_{1}/e_{2}	a path of e_1 followed by e_2	
	$e_1 e_2$	a path of e_1 or e_2	
	e*	a path of zero or more e	
	e+	a path of one or more e	
	e?	a path of zero or one e	
	!p	any predicate not p	
	$!(p_1 \ldots p_k ^p_{k+1} \ldots ^p_n)$	any (inverse) predicate not listed	
	(e)	brackets used for grouping	

PROPERTY PATHS EXAMPLE: RDF LIST

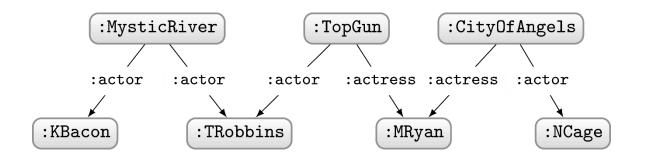

How to ask: "Which movies are in the Sharknado series?"

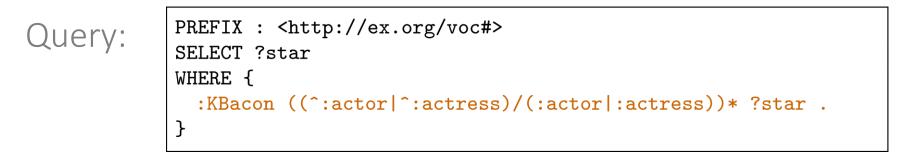

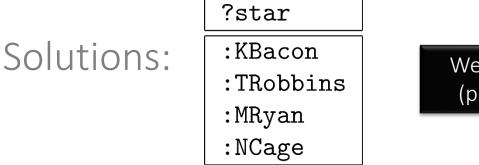

Solutions:	?movie	
	:Sharknado	
	:Sharknado2	
	:Sharknado3	

Property paths example: Finite Bacon number

How to ask: "Who has a finite Bacon number?"

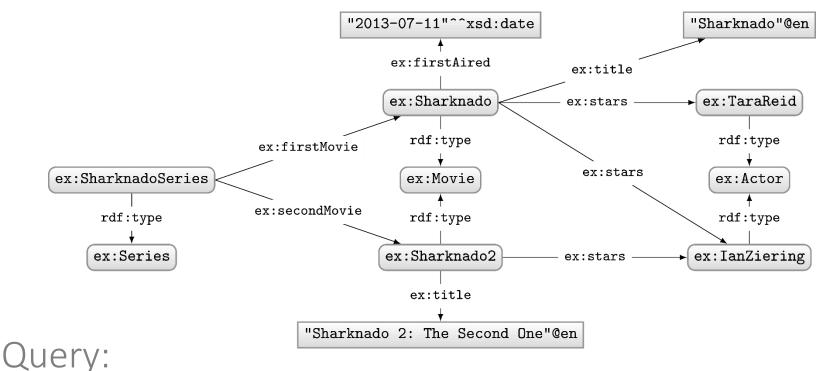

We cannot get the actual Bacon number (path length) for arbitrary length paths

NEW QUERY FEATURE: ASSIGNMENT

Assignment with **BIND**

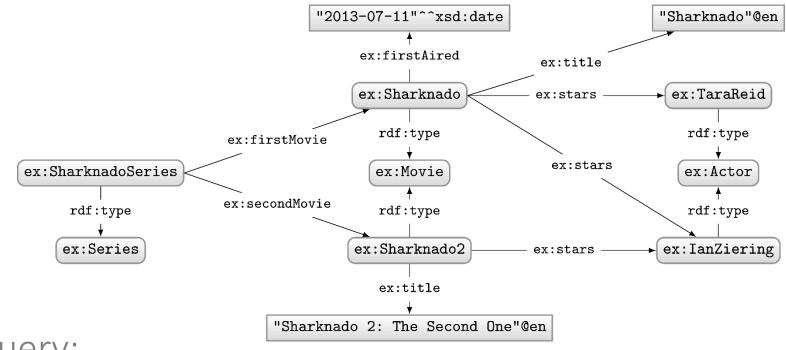

```
PREFIX ex: <http://ex.org/voc#>
SELECT ?movie ?year
WHERE {
    ?movie ex:firstAired ?date .
    BIND(xsd:int(SUBSTR(STR(?date),1,4)) AS ?year)
}
```

Solutions:

?movie	?year
ex:Sharknado	2013

Assignment with VALUES

Query:

```
PREFIX ex: <http://ex.org/voc#>
SELECT *
WHERE {
    ?movie ex:stars ?star .
    VALUES (?movie ?star)
        { (UNDEF ex:TaraReid)
            (ex:Sharknado2 UNDEF) }
}
```

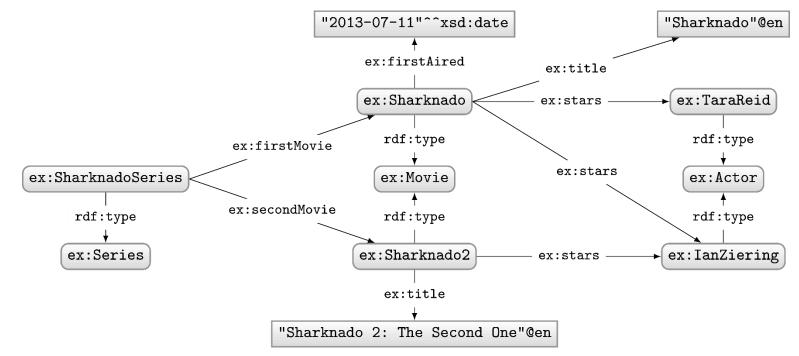

Solutions:

?movie	?star
ex:Sharknado	ex:TaraReid
ex:Sharknado2	ex:IanZiering

No result for ex:Sharknado ex:IanZiering!

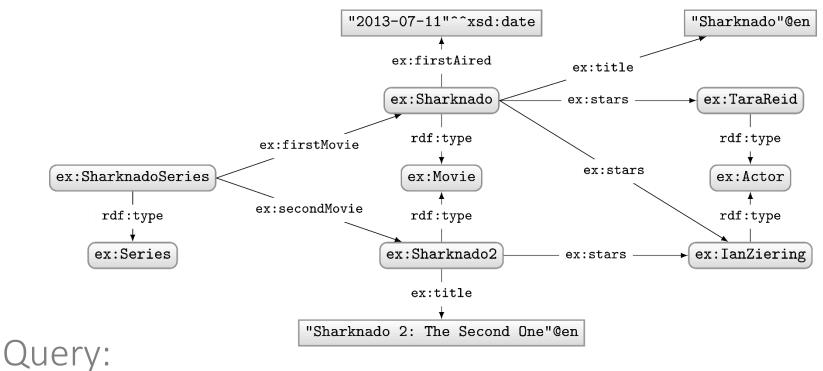

New query feature: Aggregates

Aggregates

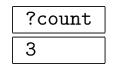

How to ask: "How many movie stars are in the data?"

AGGREGATES: COUNT

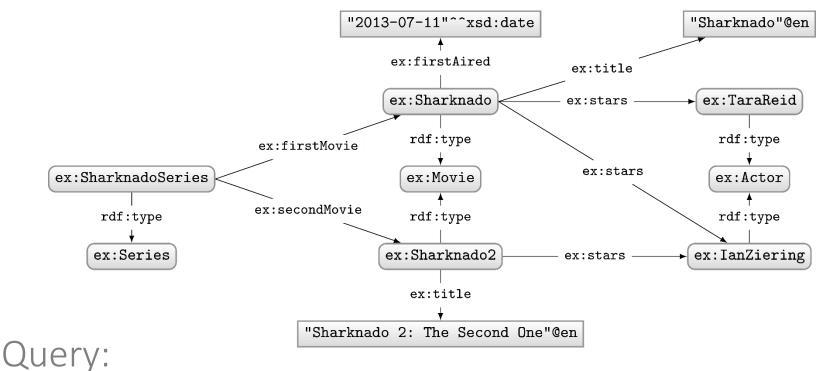

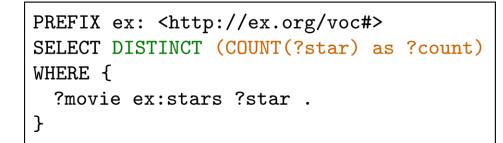

Solutions:

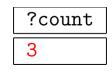

AGGREGATES: COUNT

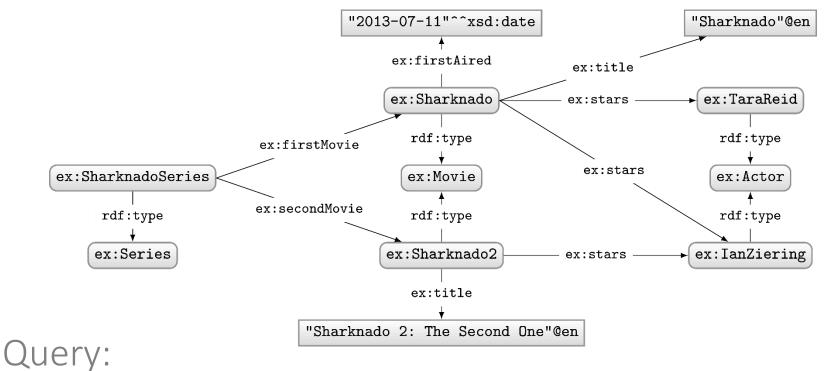

Solutions:

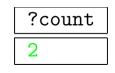

DISTINCT applied after COUNT!

AGGREGATES: COUNT

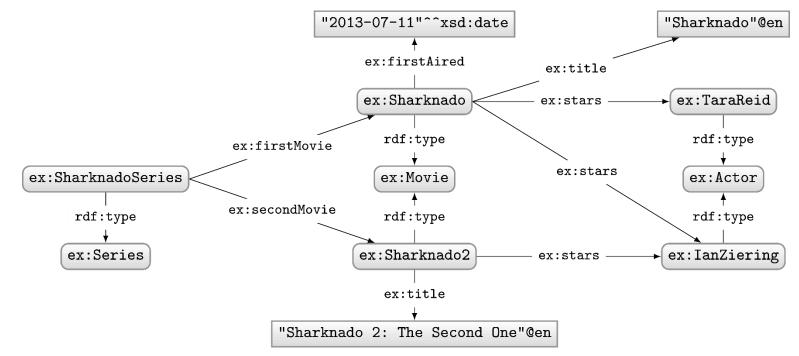

Solutions:

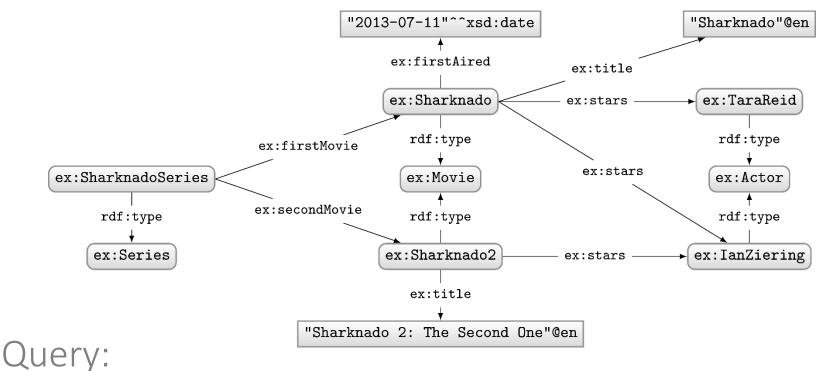

Aggregates

How to ask: "How many stars does each movie have?"

AGGREGATES: COUNT WITH GROUP BY

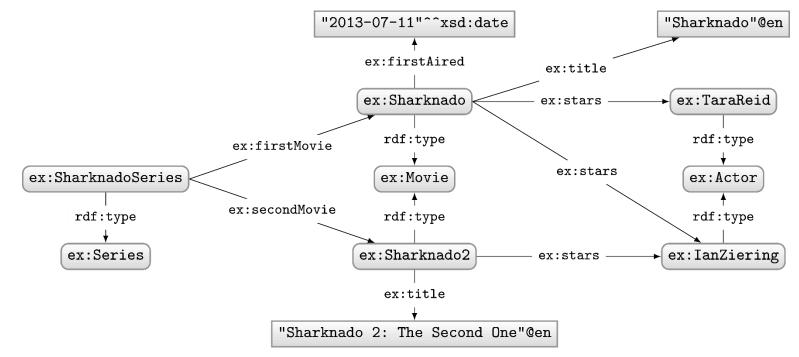

```
PREFIX ex: <http://ex.org/voc#>
SELECT ?movie
  (COUNT(DISTINCT ?star) as ?count)
WHERE {
   ?movie ex:stars ?star .
}
GROUP BY ?movie
```

Solutions:

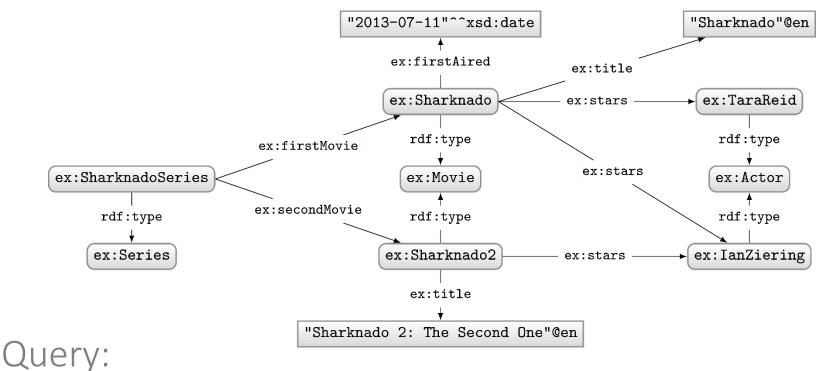

?movie	?count
ex:Sharknado	2
ex:Sharknado2	1

Aggregates

How to ask: "Give me movies with more than 1 star?"

AGGREGATES: COUNT, GROUP BY, HAVING

```
PREFIX ex: <http://ex.org/voc#>
SELECT ?movie
  (COUNT(DISTINCT ?star) as ?count)
WHERE {
   ?movie ex:stars ?star .
}
GROUP BY ?movie
HAVING(COUNT(DISTINCT ?star) > 1)
```

Solutions:

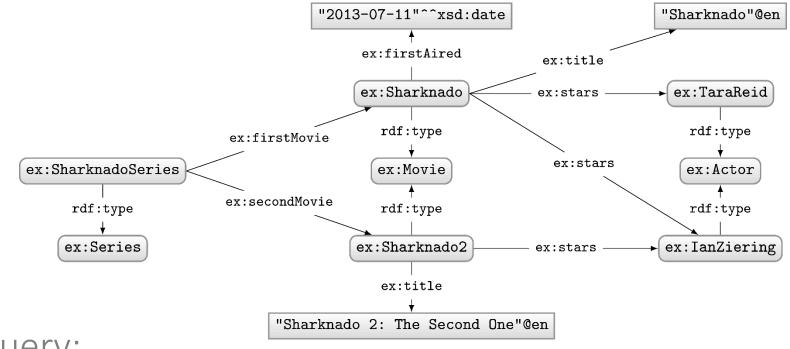

?movie	?count
ex:Sharknado	2

HAVING is like a FILTER for aggregates

AGGREGATES IN SPARQL1.1

- COUNT: Count values
- SUM: Sum a set of values
- MIN: Find the lowest value
- MAX: Find the highest value
- AVG: Get the average of values
- **GROUP_CONCAT**: String-concat values
- **SAMPLE**: Select a value (pseudo-randomly)

ONE MORE AGGREGATES EXAMPLE: SAMPLE

```
Query:
```

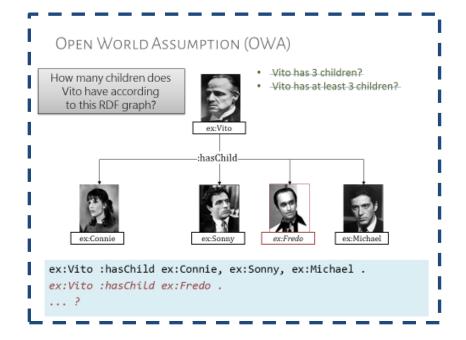

```
PREFIX ex: <http://ex.org/voc#>
SELECT ?movie
  (SAMPLE(?star) as ?aStar)
WHERE {
   ?movie ex:stars ?star .
}
GROUP BY ?movie
HAVING(COUNT(DISTINCT ?star) > 1)
```

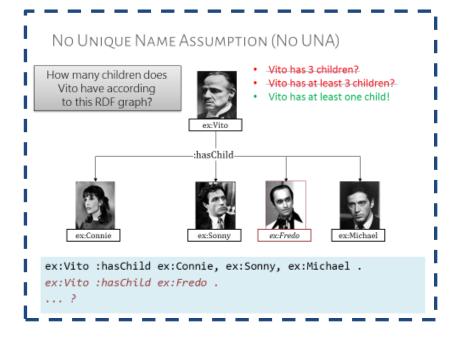

Solutions:

QUICK NOTE ON SEMANTICS

RECALL FROM OWL: OWA AND LACK OF UNA

BUT IN SPARQL ...

Looks like SPARQL has a UNA and a CWA ...

But SPARQL does not have "worlds". It does not interpret "real people".

SPARQL works on data. SPARQL counts RDF terms, not children.

ex:Michael

Query:

ex:Sonny

ex:Vito

:hasChild

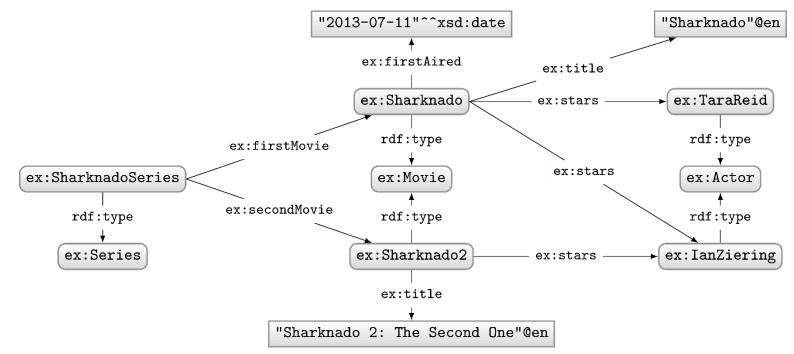

PREFIX ex: <http://ex.org/voc#>
SELECT (COUNT(?child) as ?count)
WHERE { ex:Vito :hasChild ?child . }

Solutions:

?count 4

ex:Fredo

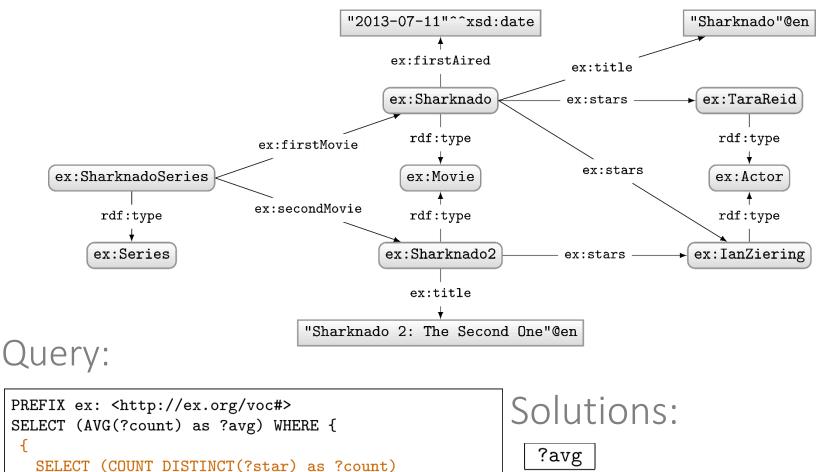

New query feature: Subqueries

How to ask: "How many stars does a movie have on average?"

GROUP BY ?movie

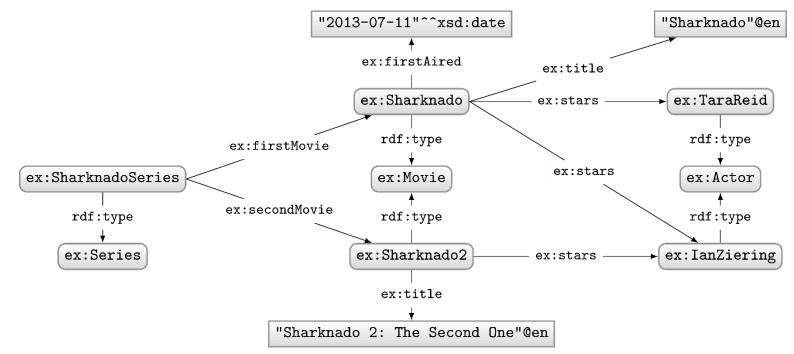

} }

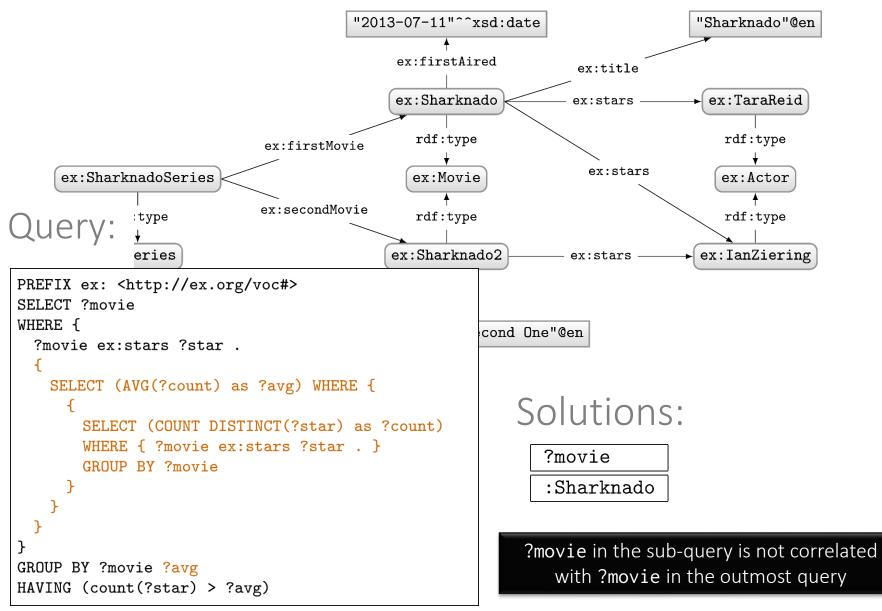

WHERE { movie ex:stars ?star . }

Sub-queries useful when you need solution modifiers or aggregates in the middle of a more complex query.

1.5

How to ask: "Which movies have more stars than average?"

New query feature: Federation

ENDPOINTS OFTEN MADE PUBLIC/ONLINE

	Wikidata Query Service	Examples	🛛 Help 🗸	More tools	文 _人 English
0	1 (Input a SPARQL query or c	hoose a query ex	ample)		
X					
# -					
\Leftrightarrow					
B					
9					
圃					
00					
					3

FEDERATION: EXECUTE SUB-QUERY REMOTELY

```
PREFIX geo: <http://www.opengis.net/ont/geosparql#>
PREFIX lgdo: <http://linkedgeodata.org/ontology/>
PREFIX geom: <http://geovocab.org/geometry#>
PREFIX bif: <bif:>

SELECT ?country ?geometry ?label WHERE {
   SERVICE <http://linkedgeodata.org/sparql> {
    ?s geom:geometry [ geo:asWKT ?geometry ] ;
    a lgdo:Embassy ;
    lgdo:country ?code ;
    rdfs:label ?label .

FILTER(bif:st_intersects(?geometry, bif:st_point(-70.6693,-33.4489), 10))
}
?country wdt:P297 ?code ;
   wdt:P30 wd:Q48 . # continent: Asia
}
```

Finds Asian embassies within 10 km of Santiago centre.

Embassies from LinkedGeoData.

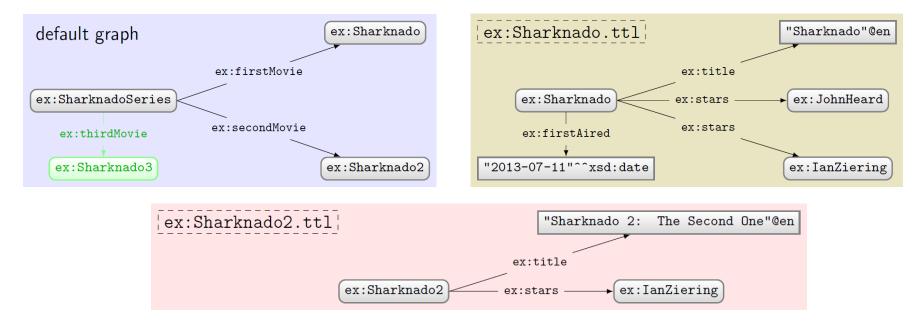

Continents from Wikidata.

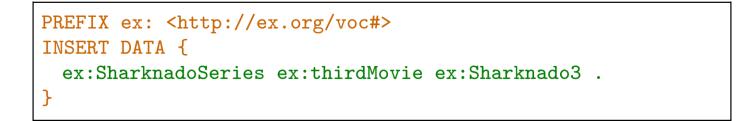

New language: SPARQL1.1 Update

WHAT'S NEW IN SPARQL1.1?

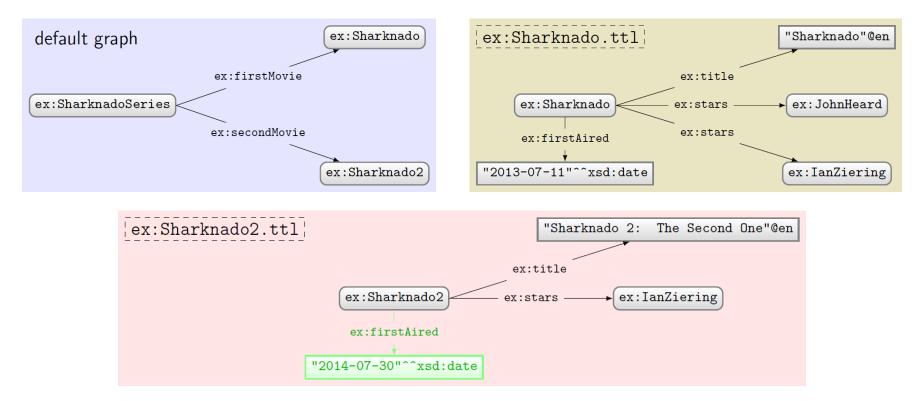

- New query features
- An update language
- Support for RDFS/OWL entailment
- New output formats

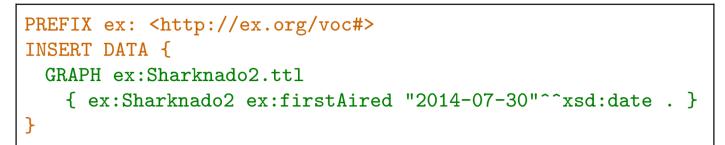

INSERT DATA default graph

INSERT DATA named graph

DELETE DATA

```
PREFIX ex: <http://ex.org/voc#>
DELETE DATA {
    ex:SharknadoSeries ex:thirdMovie ex:Sharknado3 .
}
```

```
PREFIX ex: <http://ex.org/voc#>
DELETE DATA {
    GRAPH ex:Sharknado2.ttl
        { ex:Sharknado2 ex:firstAired "2014-07-30"^^xsd:date . }
}
```

INSERT/DELETE WITH WHERE

```
PREFIX ex: <http://ex.org/voc#>
INSERT {
   GRAPH ?g { ?movie ex:description "2nd Sharknado Movie" . }
}
WHERE {
   ex:SharknadoSeries ex:secondMovie ?movie .
   GRAPH ?g { ?movie ?p ?o }
}
```

```
PREFIX ex: <http://ex.org/voc#>
DELETE {
   GRAPH ?g { ?movie ex:title ?title . }
}
WHERE {
   ex:SharknadoSeries ex:firstMovie ?movie .
   GRAPH ?g { ?movie ex:title ?title . }
}
```

Combining INSERT/DELETE

```
PREFIX ex: <http://ex.org/voc#>
DELETE {
    GRAPH ?g { ?movie ex:description ?olddescription . }
}
INSERT {
    GRAPH ?g { ?movie ex:description "Best of the series" . }
}
WHERE {
    ex:SharknadoSeries ex:secondMovie ?movie .
    GRAPH ?g { ?movie ex:description ?olddescription . }
}
```

Solutions for WHERE generated before insertions/deletions

Deletions performed before insertions.

Set default update graph: WITH

```
PREFIX ex: <http://ex.org/voc#>
WITH ex:Sharknado2.ttl
DELETE {
    ?movie ex:description ?olddescription .
}
INSERT {
    GRAPH ex:Sharknado { ex:Sharknado ex:sequel ?movie }
}
WHERE {
    ?movie ex:title "Sharknado 2: The Second One"@en .
}
```

SIMPLE DELETE WHERE

```
PREFIX ex: <http://ex.org/voc#>
WITH ex:Sharknado2.ttl
DELETE WHERE {
   ?movie ex:description ?olddescription .
}
```

Equivalent to ...

```
PREFIX ex: <http://ex.org/voc#>
WITH ex:Sharknado2.ttl
DELETE {
    ?movie ex:description ?olddescription .
}
WHERE {
    ?movie ex:description ?olddescription .
}
```

MANAGING NAMED GRAPHS: LOAD

• LOAD a graph from the Web

LOAD (SILENT)? IRI-from (INTO GRAPH IRI-to)?

- SILENT: If load fails, suppress error
- IRI-from: location of graph online
- IRI-to: local named graph to load into
 - If not given, default graph will be appended

- Destination graph created if it does not exist (otherwise data are appended)
- Will fail if RDF cannot be extracted from source graph (unless silent is specified)

MANAGING NAMED GRAPHS: CLEAR

• CLEAR all triples from some graph(s)

CLEAR (SILENT)? (GRAPH IRI | DEFAULT | NAMED | ALL)

- SILENT: If clear fails, suppress error
- GRAPH IRI: clear specific named graph
- DEFAULT: clear default graph
- NAMED: clear all named graphs
- ALL: clear all graphs

• Will fail if graph does not exist (unless silent is specified)

MANAGING NAMED GRAPHS: CREATE

• CREATE a new blank named graph

CREATE (SILENT)? GRAPH IRI

SILENT: If create fails, suppress error
GRAPH IRI: name of graph to create

- Will fail if graph already exists (unless silent is specified)
- Existing graphs cannot be affected

MANAGING NAMED GRAPHS: DROP

• DROP (remove) some graph(s)

DROP (SILENT)? (GRAPH IRI | DEFAULT | NAMED | ALL)

- SILENT: If drop fails, suppress error
- GRAPH IRI: name of graph to drop
- DEFAULT: drop default graph
- NAMED: drop all named graphs
- ALL: drop all graphs
- Will fail if graph does not exist (unless silent is specified)
- An engine must have a default graph: DROP DEFAULT same as CLEAR DEFAULT

MANAGING NAMED GRAPHS: COPY

• COPY one graph to another

COPY (SILENT)? ((GRAPH)? IRI-from | DEFAULT) TO ((GRAPH)? IRI-to | DEFAULT)

- SILENT: If copy fails, suppress error
- IRI-from: name of graph to copy from
- IRI-to: name of graph to copy to
- DEFAULT: copy from/to default graph

- May fail if source graph does not exist (unless silent is specified)
- Destination graph will be created or cleared before the copy is done
- Source graph unaffected

MANAGING NAMED GRAPHS: MOVE

• MOVE one graph to another

- SILENT: If move fails, suppress error
- IRI-from: name of graph to move
- IRI-to: name of graph to move to
- DEFAULT: move from/to default graph

- May fail if source graph does not exist (unless silent is specified)
- Destination graph will be created or cleared before the copy is done
- Source graph dropped after the move.

Managing named graphs: ADD

• ADD data from one graph to another

ADD (SILENT)? ((GRAPH)? IRI-from | DEFAULT) TO ((GRAPH)? IRI-to | DEFAULT)

- SILENT: If add fails, suppress error
- IRI-from: name of graph to add
- IRI-to: name of graph to add to
- DEFAULT: add from/to default graph

- May fail if source graph does not exist (unless silent is specified)
- Destination graph created if it does not exist (otherwise data are appended)
- Source graph unaffected

New feature: SPARQL1.1 Entailment Regimes

WHAT'S NEW IN SPARQL1.1?

- New query features
- An update language
- Support for RDFS/OWL entailment
- New output formats

SPARQL1.1 ENTAILMENT REGIMES

- States how entailments can be included in SPARQL results
- Support for RDFS / sublanguages of OWL
- Not well supported (to best of my knowledge)
- Not going to cover it
- If interested, check out the book chapter or
 - <u>http://www.w3.org/TR/sparql11-entailment/</u>

New feature: SPARQL1.1 Output Formats

WHAT'S NEW IN SPARQL1.1?

- New query features
- An update language
- Support for RDFS/OWL entailment
- New output formats

SPARQL1.1 OUTPUT FORMATS

- SELECT, ASK (non-RDF):
 XML (1.0), JSON (1.1), CSV/TSV (1.1)
- CONSTRUCT, DESCRIBE (RDF)
 - Standard RDF syntaxes: RDF/XML, Turtle, etc.

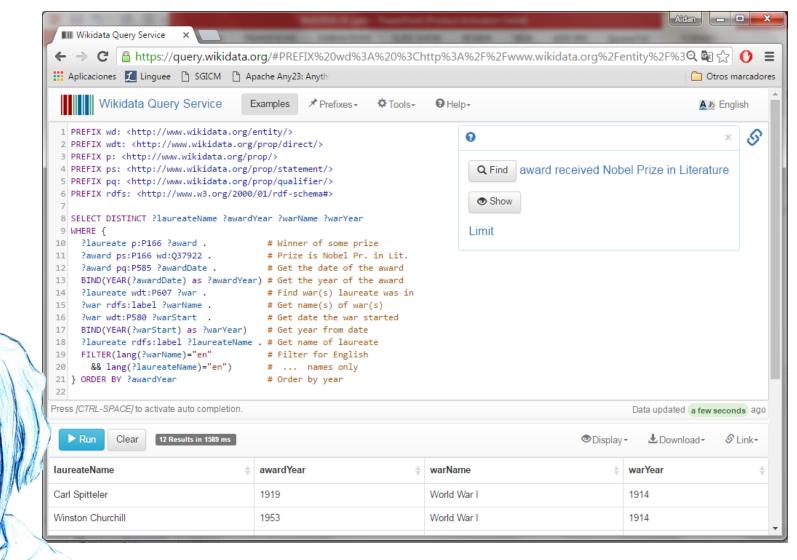

QUICK MENTION: SPARQL1.1 PROTOCOL

Defines a HTTP protocol

- How to issue queries/update over HTTP – GET / POST
- How different output formats can be requested
 Accept: text/turtle, application/rdf+xml
- What response codes should be returned; e.g.
 - 200 if successful
 - 4XX if SPARQL query is invalid
 - 5XX if query was okay but server failed to answer
 - ... etc. See more details:
 - <u>http://www.w3.org/TR/sparql11-protocol/</u>
