LA WEB DE DATOS

PRIMAVERA 2024

LECTURE 1: INTRODUCTION

Aidan Hogan
aidhog@gmail.com

THE WEB

THE WEB IS NOW 3 DECADES OLD

THE FUTURE OF THE WEB?

What will the Web be like in 3 decades time?

THE SEMANTIC WEB?

SEMANTIC WEB?

The Google logo is centered on the page, featuring its characteristic multi-colored letters: 'G' in blue, 'o' in red, 'o' in yellow, 'g' in blue, 'l' in green, and 'e' in red.

SEMANTIC WEB?

"The Semantic Web will bring structure to the meaningful content of Web pages, creating an environment where software agents roaming from page to page can readily carry out sophisticated tasks for users."

– Berners-Lee et al. (2001) "The Semantic Web" *Sci. American* 283: 34-43.

Consider answering: "What is the Web?"

WHAT'S WRONG WITH THE
CURRENT WEB?

THE CURRENT WEB IS GREAT!

THE CURRENT WEB IS GREAT!

Google is also pretty great

movie what's in the box

Seven (stylized as SE7EN) is a 1995 American crime thriller **film** directed by David Fincher and written by Andrew Kevin Walker. It stars Brad Pitt, Morgan Freeman, Gwyneth Paltrow, John C. McGinley, R. Lee Ermey, and Kevin Spacey.

Theodor Mommsen

From Wikipedia, the free encyclopedia

Christian Matthias Theodor Mommsen (30 November 1817 – 1 November 1903) was a German classical scholar, historian, jurist, journalist, politician, archaeologist^[1] and writer generally regarded as one of the greatest classicists of the 19th century. His work regarding Roman history is still of fundamental importance for contemporary research. He received the Nobel Prize in Literature in 1902 for being "the greatest living master of the art of historical writing, with special reference to his monumental work, *A History of Rome*", after having been nominated by 18 members of the Prussian

Theodor Mommsen

THE LAUREATE ALGORITHM (3 DECADES ON)

results := \emptyset

for all *nobel-lit-winner* in *wiki-list*

year-prize := year of *nobel-lit-winner*

wars := search “war”, “conflict”, “battle” in *nobel-lit-winner*

for all *war* in *wars*

year-war := starting year of *war*

add *nobel-lit-winner*, *year-prize*, *war*, *year-war* to *results*

end

end

return *results*

THE LAUREATE ALGORITHM (6 DECADES ON?)

```
nobel-lit-winner-and-wars := magical-sem-web-results()  
return nobel-lit-winner-and-wars
```

"I THINK YOU SHOULD BE MORE EXPLICIT HERE IN STEP TWO."

DOING A REPORT FOR UNIVERSITY ...

Wants to find all:

- Nobel Prize winners in Literature
- Who fought in at least one war
- The year they won the prize
- And the year the war(s) started

... why is this query hard on the current Web?

ASIDE: CHATGPT?

SO WHAT'S THE PROBLEM ...

THE CURRENT WEB IS DOCUMENT-CENTRIC

http://ex.org/Ireland

http://ex.org/Dublin

```
<html>
```

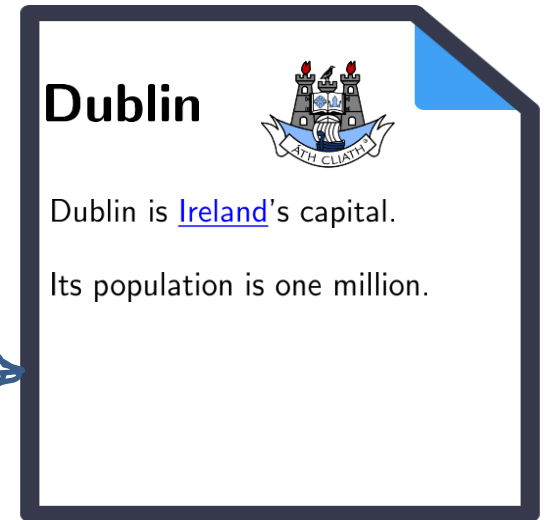

```
</html>
```

THE CURRENT WEB IS DOCUMENT-CENTRIC

http://ex.org/Ireland

http://ex.org/Dublin

```
<html>
  <body>
    <h1>Ireland</h1>
    <div class="flag"></div>
    <p>Ireland is a European country.</p>
    <p>Its capital is <a href="http://ex.org/Dublin">Dublin</a>.</p>
    ...
  </body>
</html>
```

(MOST OF IT) MAKES SENSE TO HUMANS

<http://ex.org/Ireland>

<http://ex.org/Dublin>

Ireland

Ireland is a European country.

Its capital is [Dublin](#).

Dublin

Dublin is [Ireland](#)'s capital.

Its population is one million.

... ASSUMING THEY SPEAK THE LANGUAGE

<http://ex.org/Ireland>

<http://ex.cl/Dublín>

Ireland

Ireland is a European country.

Its capital is Dublin.

Dublín

Dublín es la capital de [Irlanda](#).

Su población es un millón.

EVEN WORSE FOR MACHINES

`http://ex.org/Ireland`

`http://ex.cl/Dublín`

Ireland

Ireland is a European country.

Its capital is [Dublin](#).

Dublín

Dublín es la capital de [Irlanda](#).

Su población es un millón.

MULTIPLE NAMES, ONE THING ...

Ireland

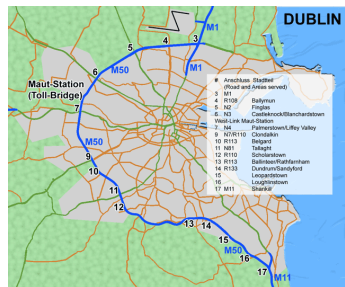

IE

Irlanda

Rep. of Ireland

ONE NAME, MULTIPLE THINGS ...

Dublín

MULTIPLE WAYS TO SAY THE SAME THING ...

Dublin's population is one million.

Dublin has a population of one million.

Dublin's population is 1,000,000.

Dublin has 1,000,000 inhabitants.

One million people live in Dublin.

[Dublin] Its population is one million.

La población de Dublín es un millón.

MULTIPLE MEANINGS FOR THE SAME SAYING ...

Sherlock saw the man using binoculars.

NOT SAYING WHAT IS MEANT ...

Fred está arriba la pelota.

THE SEMANTIC GAP

WHAT IF WE COULD "STRUCTURE" EVERYTHING ...

ONE SYMBOL, ONE MEANING ...

Ireland

IE

Irlanda

Rep. of Ireland

☪

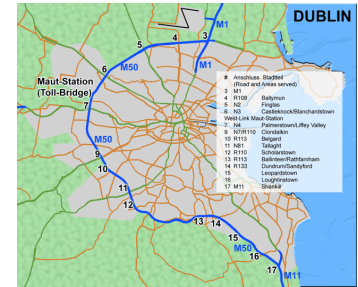

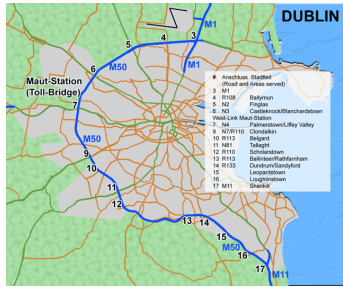

♂

☾

ᵢ

ONE SYMBOL, ONE MEANING ...

Dublín

ONE (SIMPLE) WAY TO SAY ONE THING ...

Dublin's population is one million.

Dublin has a population of one million.

Dublin's population is 1,000,000.

Dublin has 1,000,000 inhabitants.

One million people live in Dublin.

[Dublin] Its population is one million.

La población de Dublín es un millón.

Atacama Pathfinder Experiment

From Wikipedia, the free encyclopedia

The **Atacama Pathfinder Experiment (APEX)** is a [radio telescope](#) 5,100 meters above sea level, at the [Llano de Chajnantor Observatory](#) in the [Atacama desert](#) in northern [Chile](#), 50 km east of [San Pedro de Atacama](#) built and operated by 3 European research institutes. The main dish has a diameter of 12 m and consists of 264 aluminium panels with an average surface accuracy of 17 micrometres (*rms*). The telescope was officially inaugurated on September 25, 2005.

The APEX telescope is a modified [ALMA](#) (Atacama Large Millimeter Array) prototype antenna and is at the site of the ALMA observatory. APEX is designed to work at sub-millimetre wavelengths, in the 0.2 to 1.5 mm range — between infrared light and radio waves — and to find targets that ALMA will be able to study in greater detail. Submillimetre astronomy provides a window into the cold, dusty and distant Universe, but the faint signals from space are heavily absorbed by water vapour in the Earth's atmosphere. [Chajnantor](#) was chosen as the location for such a telescope because the region is one of the driest on the planet and is more than 750

Sources tell us the problem can be traced back to revisions in Lee's [Wikidata](#). If you look at the [profile's recent history](#), Wiki user “&beer&love” changed Lee's Wiki data to include a “date of death.” Since Siri [pulls data automatically](#) from Wiki pages, without edit or modification, the program temporarily included the false death claim. The timing of the inquiry just happened to coincide with the false information being present at that point.

ABSTRACT

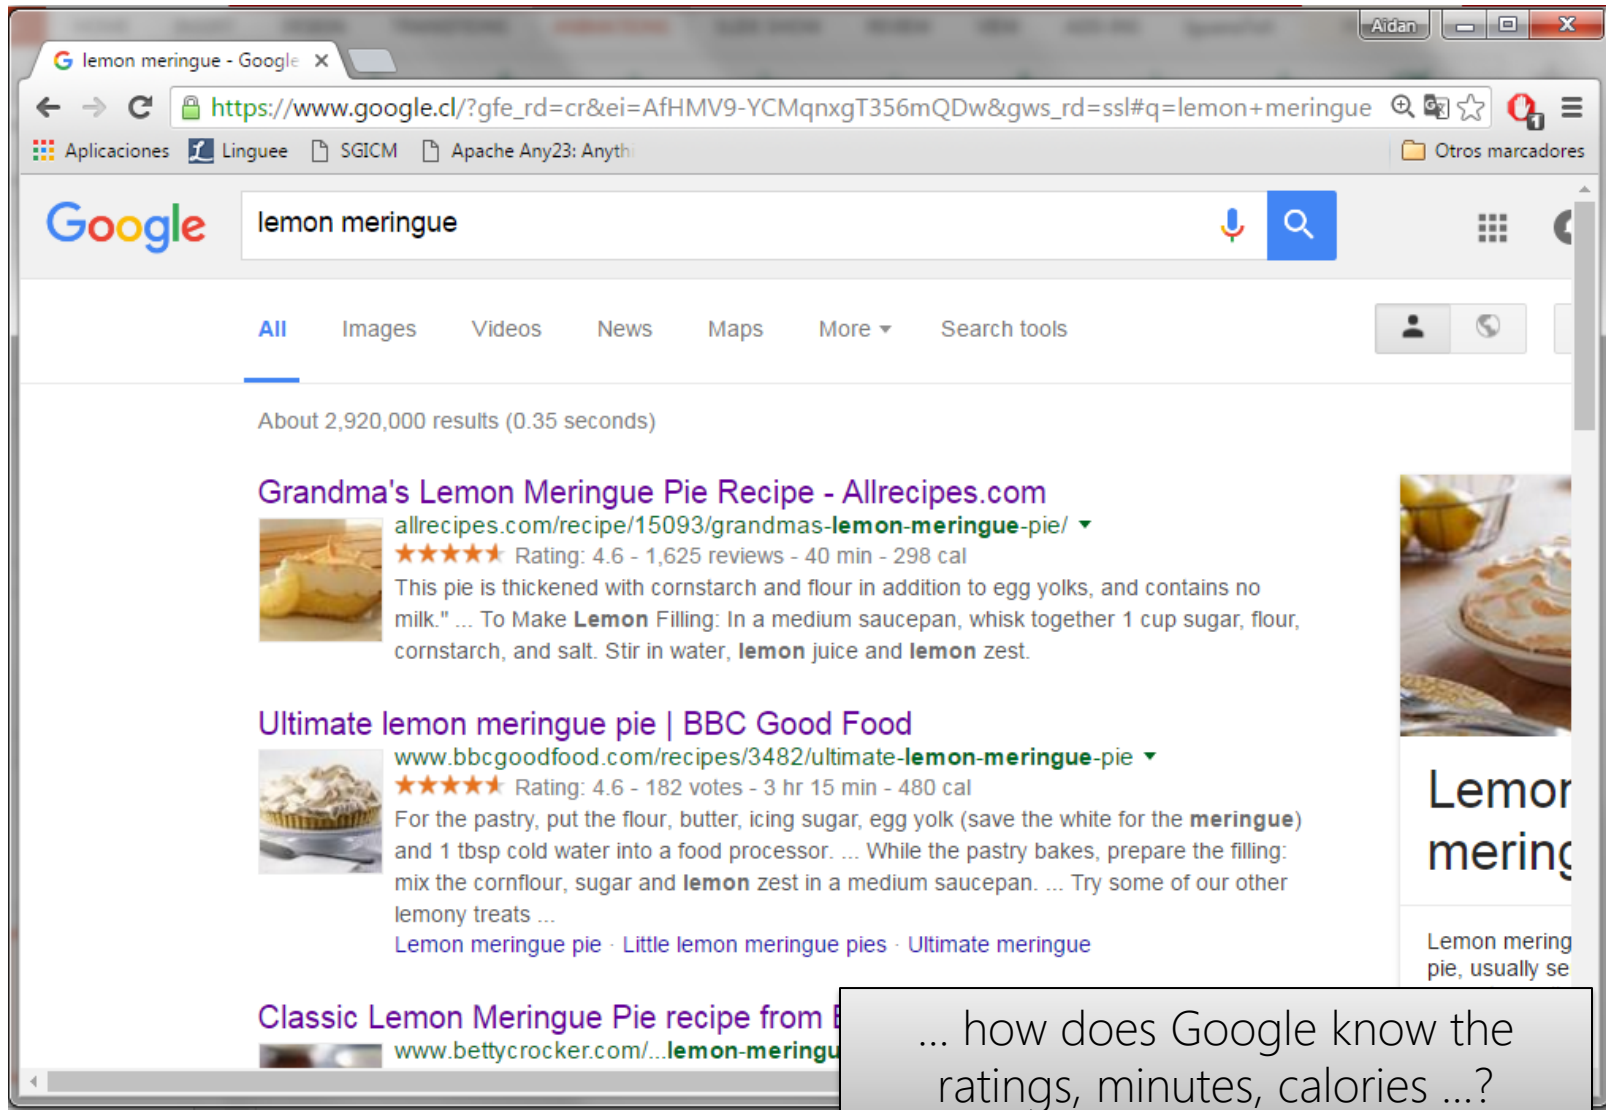

Collaborative knowledge bases that make their data freely available in a machine-readable form are central for the data strategy of many projects and organizations. The two major collaborative knowledge bases are Wikimedia's Wikidata and Google's Freebase. Due to the success of Wikidata, Google decided in 2014 to offer the content of Freebase to the Wikidata community. In this paper, we report on the ongoing transfer efforts and data mapping challenges, and provide an analysis of the effort so far. We describe the *Primary Sources Tool*, which aims to facilitate this and future data migrations. Throughout the migration, we have gained deep insights into both Wikidata and Freebase, and share and discuss detailed statistics on both knowledge bases.

One such collaborative knowledge base is Freebase, publicly launched by Metaweb in 2007 and acquired by Google in 2010. Another example is Wikidata, a collaborative knowledge base developed by Wikimedia Deutschland since 2012 and operated by the Wikimedia Foundation. Due to the success of Wikidata, Google announced in 2014 their intent to shut down Freebase and help the community with the transfer of Freebase content to Wikidata [10].

Moving data between two knowledge bases that do not share a similar design is usually a problematic task and requires the careful mapping between their structures. The migration from Freebase to Wikidata was no exception to this rule: we encountered a number of to-be-expected *structural* challenges. However, even more demanding was the *cultural* difference between the two involved communities.

STANDARDS FOR OPEN DATA: LINKED OPEN DATA

HOW TO PUBLISH OPEN DATA?

5-Star Linking Open Data Scheme

THE LINKED DATA CLOUD

ABOUT THE COURSE ...

TOPICS COVERED

- RDF (triple-based data model)
- RDFS/OWL (ontological languages)
- SPARQL (query language)
- Linked Data / Web of Data
- RDB2RDF (importing databases to Sem. Web.)
- Shapes (validating RDF data)

RESEARCH COURSE

STRUCTURE OF THE COURSE

- Each week:
 - Class on Monday (learn concepts)
 - Lab on Wednesday (see concepts in practice)
 - Auxiliar session on Friday (Q&A)
- Marking structure:
 - 70% labs
 - 20% project
 - 10% reading group

BIBLIOGRAPHY

Aidan Hogan

The Web of Data

This book concisely brings together the key standards and best practices relating to modelling, querying, validating and linking machine-readable data and semantics on the Web. Alongside practical examples and formal definitions, the book shows how these standards contribute to – and have been used thus far on – the “Web of Data”: a machine readable evolution of the Web marked by increased automation, enabling powerful Web applications capable of discovering, cross-referencing, and organising data from numerous websites in a matter of seconds.

The book is divided into nine chapters, the first of which highlights the fundamental shortcomings of the current Web that illustrate the need for increased machine readability. The next chapter outlines the core concepts of the “Web of Data”, discussing use-cases on the Web where they have already been deployed. “Resource Description Framework (RDF)” describes the graph-structured data model proposed by the Semantic Web community as a common data model for the Web. The chapter on “RDF Schema (RDFS) and Semantics” presents a lightweight ontology language used to define an initial semantics for RDF graphs. In turn, the chapter “Web Ontology Language (OWL)” elaborates on a much more expressive ontology language built upon RDFS. In “SPARQL Query Language” a language for querying and updating RDF graphs is described. “Shape Constraints and Expressions (SHACL/ShEx)” introduces two languages for describing the expected structure of – and expressing constraints over – RDF graphs for the purposes of validation. “Linked Data” discusses the principles and best practices by which interlinked (RDF) data can be published on the Web, and how they have been adopted. The final chapter highlights open problems and concludes with a general discussion on the future of the Web of Data.

The book is intended for students, researchers and advanced practitioners interested in learning more about the Web of Data, and about closely related topics such as the Semantic Web, Knowledge Graphs, Linked Data, Graph Databases, Ontologies, etc. Offering a range of accessible examples and exercises, it can be used as a textbook for students and other newcomers to the field. It can also serve as a reference handbook for researchers and developers, as it offers up-to-date details on key standards (RDF, RDFS, OWL, SPARQL, SHACL, ShEx, RDB2RDF, LDP), along with formal definitions and references to further literature. The associated website webofdatabook.org offers a wealth of complementary material, including solutions to the exercises, slides for classes, interactive examples, and a section for comments and questions.
